RE: MONTHLY PROGRESS REPORT – SEPTEMBER 2018
THIRD SITE, ZIONSVILLE, INDIANA

Dear Mr. Ohl:

October 11, 2018

This Monthly Progress Report has been prepared by Ramboll US Corporation (Ramboll) on behalf of the Third Site Trust (the Trust) pursuant to the Administrative Order by Consent (the Order) for Third Site, located in Zionsville, Indiana (the Site). The Order became effective on December 2, 2002. This Monthly Progress Report includes activities conducted during the month of September 2018.

I. Activities Completed During Reporting Month

- Water pumping and treatment from the Third Site extraction wells was conducted throughout September. With the exception of EW-3, the extraction wells operated for approximately 20 days during the month. As noted in the May 2018 Monthly Progress Report, extraction well EW-3 is non-operational and is expected to remain so throughout the ERH remediation. The extraction wells shut down over Labor Day weekend due to a high-level alarm in tank T-11. The system was restarted on September 4. The treatment system shut down overnight on September 5 due to a communication break with the ECC control panel. This issue was addressed, and the system was restarted on September 6. The extraction wells shut down on September 21 due to an electrical short in the Third Site PLC. The short was from the ERH system energizing the EW-3 leak detection sensor. The PLC panel was repaired on September 24, and the system was restarted. The system remained operational through the remainder of the month.
- Water treatment system performance samples were collected September 7. None of the effluent samples contained any contaminants of concern (COCs) above their respective effluent discharge limits. A discharge monitoring report will be submitted to IDEM in October.
- A remedial progress surface water and subsurface water sampling was conducted during the week of September 10.
- The ERH construction activities continued in September as discussed in the attached progress report prepared by McMillan-McGee Corp. (Attachment A). Startup of the ERH system operations was conducted on September 24.

II. Data Generated During the Reporting Month

- Pumped-water volume data for the extraction wells were collected during September. Collected data are provided in Attachment B.
- Analytical results from the June 2018 remedial progress monitoring were validated and have been incorporated into the groundwater monitoring and surface water results summary tables (Tables 2 and 3) provided in Attachment C. A sample location map is also provided for reference. Also included in Attachment C, are the results from the individual pump-and-treat extraction wells along with post-treatment effluent sample results (Table 4).
- Preliminary analytical results were received for the September 2018 remedial progress monitoring. These results will be provided to USEPA upon validation.

III. Developments/Difficulties Encountered During the Reporting Month

- Preliminary data from the September 2018 remedial progress monitoring were received and are being evaluated.

IV. Activities Anticipated for Next Reporting Month

- Operation and maintenance of the pump-and-treat system will continue.
- In-situ well cleaning is planned for EW-1. If necessary, the raw water line may be jetted in October.
- The heating phase for the ERH system will continue in October.
- Data from the September 2018 remedial progress monitoring are expected to be provided to USEPA.

Please do not hesitate to contact me if you have any questions concerning this Monthly Progress Report.

Sincerely,

Ramboll US Corporation

Andrew A. Gremos, LPG, CHMM

Progress Report

September 2018

Installation, Operation, and Maintenance of ERH at Third Site

985 South US Highway 421
Zionsville, Indiana

Summary

This progress report has been prepared by McMillan-McGee Corporation (Mc^2) on behalf of the Third Site Trust Fund (TSTF) pursuant to the Administrative Order by Consent (the order) for Third Site, located in Zionsville, Indiana (the Site). The revised Order approving Electrical Resistive Heating (ERH) groundwater remediation became effective on December 16, 2016. This monthly progress report includes activities conducted during the month of September 2018.

1. Activities Completed During Reporting Month

- MK Environmental (MK) was on site from September 1 to 12 to complete construction of the above ground treatment system. Mc^2 was present to oversee this work.
- On September 1, Mc^2 placed remaining communication cables for the ERH system data network.
- From September 3 to 20, Mc^2 placed heat trace and installed insulation to winterize the electrode water injection hoses in the wellfield. IWM Consulting Group (IWM) assisted with this work from September 15 to 20.
- On September 12, the Town of Zionsville performed electrical inspection of the ERH system and approved energization from the utility. The electrical permit did not allow for electrical power to the office unit. Duke Energy energized the power feed to the ERH system on September 13.
- From September 13 to 21, MK trained the IWM operators on operation of the above ground treatment system and commissioned the treatment equipment.
- Mc^2 performed commissioning of the ERH system from September 14 to 24. The ERH system data network was reconfigured as electrical power could not be provided to the office trailer. IWM assisted with this work from September 20 to 24.
- West Electric was onsite on September 13, 14, 17 and 21 to support power up of ERH equipment, terminate heat trace for electrode water injection hoses, complete the ERH system data network, and install the fence security system.
- IWM was trained on operation of ERH equipment on September 24 and 25. Mc^2 completed the operations hand off and left the site on September 25.
- Startup of ERH operations occurred in the afternoon of September 24.
- MK was on site on September 28 to address maintenance issues identified with treatment equipment. It was determined the T-219 holding tank required a replacement lid, although replacement could wait until the part arrived. This part was placed on order.

2. Data Generated During Reporting Month

- On September 16 and 20, Mc² obtained treated water samples from the 10,000 gallon treated water holding tank, for leftover wastewater from the drilling effort and the first batch of well field water, respectively. These samples were analyzed by Pace Laboratories (Pace) for discharge to the ERH wellfield and to Finley Creek for system commissioning and start up activities. Lab results for the two sample dates were obtained on September 18 and 21, respectively. Lab results and pH readings were within National Pollutant Discharge Elimination System permit-equivalency limitations.
- On September 20, Mc² obtained quality control measurements of electrode current readings.
- On September 21 and 24, Mc² obtain step and touch voltage potential measurements of wellfield infrastructure prior to ERH start up.
- On September 25, Mc² obtained baseline vapor and liquid samples from the treatment system for analysis by Pace. Lab results are expected on October 3.
- On September 24, Mc² began generating data per the project requirements defined in the Sampling and Analysis Plan. The data requirements for ERH operations are summarized in the following table:

Item	Media	Location	Method	Frequency
Power, current, voltage	Subsurface	Electrodes	PDS (automatic)	Minutely (averaged daily)
Temperature	Subsurface	Sensor wells	OptiTAM™ (automatic)	Hourly (averaged daily)
Temperature	Extracted fluids	Extraction wells, treatment system	Temperature gauge or gun (manual)	Daily
Vacuum	Vapor extracted	Vacuum Monitoring/ Extraction wells	Vacuum gauge (manual)	Daily
Level	Groundwater	Extraction and monitoring wells	Water Level Interface Probe	Weekly
Flow Rate	Vapor extracted	Treatment influent	Averaging pitot tube (manual)	Daily
Flow Rate	Vapor discharged	Treatment effluent	Averaging pitot tube (manual)	Daily
Flow Rate	Vapor extracted	Extraction wells	Averaging pitot tube (manual)	Biweekly
Volume	Water extracted	Treatment influent	Flow totalizer (manual)	Daily
Volume	Water discharged	Treatment effluent	Flow totalizer (manual)	Daily

Volume	Water injected	Treatment reinjection	Flow totalizer (manual)	Daily
Volume	Water injected	Electrodes	WCS (automatic)	Hourly (averaged daily)
Vapor VOCs	Vapor extracted	Extraction wells	PID (manual)	Biweekly
Vapor VOCs	Vapors treated	Treatment system	PID (manual)	Daily
Vapor VOCs	Vapor discharged	Treatment effluent	PID (manual)	Daily
Vapor VOCs ¹ (Analytical)	Vapors treated	Selected treatment system sample ports	USEPA TO-15 modified (Tedlar bag) (manual)	Biweekly
Liquid VOCs ¹ (Analytical)	Liquids treated	Selected treatment system sample ports	USEPA 8260B Pump or valve (manual)	Biweekly

3. Developments/Difficulties Encountered During the Reporting Month

As reported in the previous reports, during application for an electrical permit for the ERH installation with the Town of Zionsville, West Electric determined that a Construction Design Release (CDR) may be required from the State of Indiana, Department of Homeland Security (IDHS) Building Division. After discussions with IDHS, it was indicated that adding an equipment anchoring plan to the electrical permit package would likely be adequate to meet CDR requirements for the ERH system. The electrical design package was submitted in early July for review by IDHS. It was indicated that the review is normally a two-week process. On July 24, IDHS indicated further information was needed for the electrical permit application to proceed.

Additional information requested by IDHS, including an additional form, detailed project description, and revised project figures was submitted to the state inspector on August 6. On August 8, the State reviewer requested a revised project description, and information regarding the equipment enclosures. Mc² had a call with the State reviewer on August 9. Upon clarifications of the purpose, design, and operation of the ERH system, the inspector believed that the CDR could be waived, or not require review of the detailed design. The inspector requested Mc² send an e-mail to the CDR department head, providing the clarifications in writing that were discussed. This e-mail was sent on August 10.

Although final construction of the MK treatment system was not possible without electrical power, MK was mobilized to the site on August 22 to complete assembly of their system to the extent practicable.

On August 21, Mc² had a call with both the IDHS department head and a senior plan reviewer, who insisted that a CDR would require the manufacturer of Industrialized Modular Systems to be registered as such in the State of Indiana. Mc² subsequently provided supporting information that the ERH installation does not have this requirement and is likely exempt from CDR. On August 29, Mc² received an email from IDHS describing the requirements to become an Indiana registered building manufacturer and obtain CDR approval for use of Industrialized Building Systems. In a phone call with Matthew Prost of

IDHS that afternoon, it was confirmed that the seven equipment enclosures for the remediation processes are exempt from requiring a CDR, and only the office/storage unit rented from Mobile Mini Inc required CDR approval for the electrical permit. On September 5, 2018, Mc² determined that Mobile Mini cannot supply the information required by IDHS; accordingly, Mc² determined to leave the office/storage unit unpowered to allow the electrical permitting process to proceed, given the acknowledgement from IDHS that their review is no longer necessary for equipment other than the Mobile Mini unit.

On September 10, USEPA received acknowledgment from IDHS that a CDR would not be required for ERH equipment that will be used entirely for a remedial action performed on Third Site. This in turn allowed inspection and permit approval from the Town of Zionsville electrical inspector, which occurred on September 12. Duke Energy energized the utility feed to the ERH and treatment equipment on September 13 so that Mc² and MK could proceed with commissioning the system.

4. Activities Anticipated for Next Reporting Month

- Mc² will continue the heating phase of ERH operations, with IWM performing onsite operations.
- West Electric will finish terminating and commissioning heat trace for the ERH water injection system in preparation for Fall weather.
- IWM will purge debris from temperature monitoring wells T-B4, TC1, and T-E1 so the temperature sensors can be placed at the correct depths.

Notes:

1. Flow totalizer reset on December 11, 2013 during work on PLC.
2. Third Site system shut down 6/19/2014 though the end of the month due to equipment malfunctions and pumping did not resume until 7/21/2014.
3. Flow totalizer reset on February 25, 2015 due to electrical issue associated with surge protector. Pump and treatment was down between February 25 and April 2, 2015 due to the loss and replacement of electrical communication between Third Site and ECC.
4. Third Site system shut down on December 14 due to PLC card failure in the PLC panel. Extraction wells shut down on December 15. System restarted on December 29 after PLC was repaired and frozen lines had thawed out.
5. Flow totalizers reset on April 5, 2017 in order for the EW-5 totalizer to register flow.
6. Transducer in EW-1 stopped working on November 6, 2017; transducer in EW-3 may be giving false readings in November 2017; transducer in EW-5 stopped working on November 8, 2017. EW-1 and EW-5 transducers replaced in January 2018.
7. EW-3 was shut down in May 2018 due to damage to that well that occurred during ERH construction.

Notes:

1. Bolded values in table are above respective Groundwater Action Levels or P&T shut down criteria.

2. Groundwater Action Levels (GAL) to be achieved after completion of monitored natural attenuation from Enforcement Action.

Memorandum dated May 11, 2001; Equivalent to MCL/IDEM Tier 1 Default Criteria of Table 2-7-C of the October 2000 EE/CA and Table 4 of the Design Report.

3. J = Estimated concentration.

4. n/a = Not applicable.

5. Samples collected in October 2002 were analyzed for the nine target COC only and not the full 8260 VOC list.

6. P&T Shut Down Criteria from Table 4 of the March 2004 Design Report. Values represent 10% of total VOC concentrations presented in Table 2-5 of the October 2000 EE/CA. For MW-27, MW-28, and MW-29, values provided represent 10% of total VOC concentrations from the 2012 sampling event (the most recent pre-pumping event). Please note that the GALs are the ultimate cleanup criteria after 10 years monitored natural attenuation as indicated in Note 2. As such, per Table 4 of the Design Report, P&T shutdown criteria are met when the wells in the plume either meet the GAL or show a 90% reduction in total VOC.

7. MW-27R abandoned in March 2018 due to ERH remedial activities in the DNAPL area

Notes:

1. Bolded values in table are above respective Groundwater Action Levels or P&T shut down criteria.

2. Groundwater Action Levels (GAL) to be achieved after completion of monitored natural attenuation from Enforcement Action Memorandum dated May 11, 2001; Equivalent to MCL/DEM Tier I Default Criteria of Table 2-7-C of the October 2000 EE/CA and Table 4 of the Design Report.

3. J = Estimated concentration.

4. n/a = Not applicable

5. Samples collected in October 2002 were analyzed for the nine target COC only and not the full 8260 VOC list.

6. P&T Shut Down Criteria from Table 4 of the March 2004 Design Report. Values represent 10% of total VOC concentrations presented in Table 2-5 of the October 2000 EE/CA. For MW-27, MW-28, and MW-29, values provided represent 10% of total VOC concentrations from the 2012 sampling event (the most recent pre-pumping event). Please note that the GALs are the ultimate cleanup criteria after 10 years monitored natural attenuation as indicated in Note 2. As such, per Table 4 of the Design Report, P&T shutdown criteria are met when the wells in the plume either meet the GAL or show a 90% reduction in total VOC.

7. MW-27R abandoned in March 2018 due to ERH remedial activities in the DNAPL area

P&T Shut Down Criteria ⁽⁶⁾	n/a	n/a	n/a	n/a	n/a	n/a	n/a	n/a	n/a	n/a	n/a	n/a	n/a	n/a	n/a	n/a	n/a	n/a	n/a	n/a	n/a	n/a

Notes:

1. Bolded values in table are above respective Groundwater Action Levels or P&T shut down criteria.

2. Groundwater Action Levels (GAL) to be achieved after completion of monitored natural attenuation from Enforcement Action

Memorandum dated May 11, 2001; Equivalent to MCL/IDEM Tier I Default Criteria of Table 2-7.

C of the October 2000 EE/CA and Table 4 of the Design Report.

3. J = Estimated concentration.

4. n/a = Not applicable

5. Samples collected in October 2002 were analyzed for the nine target CCC only and not the full 8260 VOC list.

6. P&T Shut Down Criteria from Table 4 of the March 2004 Design Report. Values represent 10% of total VOC concentrations presented in Table 2-5 of the October 2000 EE/CA. For MW-27, MW-28, and MW-29, values provided represent 10% of total VOC concentrations from the 2012 sampling event (the most recent pre-pumping event). Please note that the GALs are the ultimate cleanup criteria after 10 years monitored natural attenuation as indicated in Note 2. As such, per Table 4 of the Design Report, P&T shutdown criteria are met when the wells in the plume either meet the GAL or show a 90% reduction in total VOC.

7. MW-27R abandoned in March 2018 due to ERH. Remedial activities in the DNAPL area

Notes:

1. Bolded values in table are above respective Groundwater Action Levels or P&T shut down criteria.

2. Groundwater Action Levels (GAL) to be achieved after completion of monitored natural attenuation from Enforcement Action.

Memorandum dated May 11, 2001; Equivalent to MCL/DEM Tier 1 Default Criteria of Table 2-7-C of the October 2000 EE/CA and Table 4 of the Design Report.

3. J = Estimated concentration.

4. n/a = Not applicable.

5. Samples collected in October 2002 were analyzed for the nine target COC only and not the full 8260 VOC list.

6. P&T Shut Down Criteria from Table 4 of the March 2004 Design Report. Values represent 10% of total VOC concentrations presented in Table 2-5 of the October 2000 EE/CA. For MW-27, MW-28, and MW-29, values provided represent 10% of total VOC concentrations from the 2012 sampling event (the most recent pre-pumping event). Please note that the GALs are the ultimate cleanup criteria after 10 years monitored natural attenuation as indicated in Note 2. As such, per Table 4 of the Design Report, P&T shutdown criteria are met when the wells in the plume either meet the GAL or show a 90% reduction in total VOC.

7. MW-27R abandoned in March 2018 due to ERH remedial activities in the DNAPL area

Notes:

1. Surface Water Action Levels from Enforcement Action Memorandum dated May 11, 2001; some values from Table 2-7D of EE/CA (based on Natural Water Quality Criteria), other values supplied by USEPA.

2. J - Estimated concentration

3. Surface water frozen at SW-06 and SW-07; sample collected between the two locations.
